SUMMARY

Java Backend Developer with nearly 2 years of experience designing scalable microservice-based backend systems using Java, Spring Boot, Hibernate/JPA, and MySQL. Skilled in developing secure REST APIs, transactional workflows, JWT authentication, caching, and performance optimization in production airline booking environments. Experienced with Docker, AWS, CI/CD workflows, and maintainable backend architecture.

TECHNICAL SKILLS

Languages: Java, SQL, Python, C/C++
Backend: Spring Boot, Spring MVC, Hibernate, JPA, Spring Security, Microservices
Testing & Build: JUnit, Maven
Database: PostgreSQL, MySQL, SQL Query Optimization
API & Security: REST, JWT, RBAC
Cloud & DevOps: Docker, AWS EC2, AWS S3, Linux, Jenkins
Tools: Git, Postman, Swagger/OpenAPI

EXPERIENCE

Java Backend Developer <i>Tata Consultancy Services (TCS)</i>	Aug 2024 – Present <i>India</i>
---	------------------------------------

- Developed and maintained microservice-based backend services for airline booking and loyalty workflows using Java and Spring Boot, ensuring transactional consistency under concurrent requests.
- Engineered loyalty module features including member profiles, points accrual, tier status management, and eligibility validation.
- Delivered secure REST APIs using JWT-based authentication, RBAC authorization, and centralized exception handling.
- Designed normalized MySQL database schemas, optimized complex SQL queries, and improved query performance using indexing and execution plan analysis.
- Reduced API response latency by 15–20% in high-traffic booking workflows through SQL optimization, caching strategies, and efficient data retrieval techniques.
- Built idempotent integration between booking and loyalty systems to handle retries and partial failures safely, reducing duplicate transaction error by 20%.
- Built modular components with centralized exception handling and structured logging to improve service reliability and debugging.
- Delivered features in Agile/Scrum teams using Git-based version control and participated in code reviews and production issue debugging.

PROJECTS

Spring Boot Order Management System
Java, Spring Boot, MySQL

- Developed scalable REST APIs using layered architecture (Controller-Service-Repository pattern).
- Enforced transactional order workflows with Spring Transaction Management to maintain data consistency.
- Secured endpoints with RBAC and input middleware.
- Designed optimized MySQL schemas and queries for efficient order and inventory management.

Terms & Conditions Summarization Web Application
OpenAI API, OCR, REST APIs

- Developed a web application to summarize terms and conditions using OpenAI API.
- Integrated OCR to extract text from PDF and image files.
- Implemented REST APIs for document upload and summary generation.

EDUCATION

Saintgits College of Engineering <i>B.Tech, Computer Science Engineering — CGPA: 8.9/10</i>	Kottayam, Kerala <i>2024</i>
---	---------------------------------
