EDUCATION

Saintgits College of Engineering <i>B.Tech in Computer Science Engineering (CGPA: 8.9/10)</i>	Kottayam, India 2024
Central Board of Secondary Education <i>Class 12 (Score: 85.6%)</i>	India 2019

EXPERIENCE

Java Backend Developer <i>Tata Consultancy Services (TCS)</i>	Aug 2024 – Present India
– Designed and developed scalable backend services and RESTful APIs for airline booking and loyalty management workflows using Java and Spring Boot – Worked on loyalty module features including member profiles, points accrual, tier status, and eligibility validation – Implemented JWT-based authentication and role-based authorization to secure customer, booking, and loyalty-related APIs – Designed and optimized MySQL database schemas and queries for handling passenger, booking, and loyalty data – Built modular backend components with validation, centralized exception handling, and structured logging for high-availability airline systems – Improved API response times by 15–20% through query optimization and caching in high-traffic airline workflows – Collaborated with frontend, QA, and DevOps teams to deliver end-to-end features supporting booking, loyalty, and account management scenarios – Integrated loyalty-related services with booking workflows to ensure accurate points accrual after successful transactions – Worked in an Agile/Scrum environment, participating in sprint planning, stand-ups, code reviews, and technical discussions	

PROJECTS

Spring Boot Order Management System

Java, Spring Boot, MySQL

- * Designed and developed RESTful APIs for order and user management using Spring Boot
- * Implemented layered architecture (Controller, Service, Repository) following clean coding principles
- * Integrated JWT-based authentication and role-based access control
- * Implemented centralized exception handling and optimized database queries using Spring Data JPA
- * Managed concurrent transactions and ensured data consistency

Terms & Conditions Summarization Web Application

OpenAI API, OCR, REST APIs, Web Technologies

- * Designed and developed a web application to automatically summarize software and application terms and conditions using OpenAI API-based language models
- * Integrated OCR-based text extraction to process terms and conditions from PDF and image formats including JPEG and PNG
- * Built a scalable document processing pipeline to handle unstructured text input and generate concise, human-readable summaries
- * Implemented RESTful APIs for document upload, text extraction, and summary generation
- * Ensured accurate text parsing, error handling, and input validation for reliable end-to-end processing

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, Python, C++

Backend Technologies: Core Java, Spring Boot, Hibernate, JPA

Databases: MySQL, Relational Database Design, Query Optimization

API & Security: RESTful APIs, JWT Authentication, Role-Based Access Control

Cloud & DevOps: AWS (EC2, S3), Docker, Linux

Tools: Git, Postman, VS Code
